We Service

OUR SERVICES

We offer a full range of lighting control services which can be tailored to suit both individual schemes and partner contractor requirements. The services include:

- Design & Consultancy
- Panel Building
- Commissioning
- Service & Maintenance
- Solutions
- Specialist kit

Design & Consultancy

Whatever the project, our highly experienced team of designers can offer expert insight and technical design input to help deliver the perfect lighting provision for your scheme. We always aim to deliver the most creative, energy efficient solutions that are both practical and smart.

Panel Building

Our in-house team can create bespoke panels to help facilitate simple and seamless lighting management, whatever the project size or scope. We are used to working with demanding delivery schedules, whilst maintaining quality and safety. All our bespoke panels come with schedules to make identifying circuits easy.

Commissioning

Our time-served commissioning engineers can visit your site and assist with the configuration of any type of lighting installation. From fine-tuning settings to minimising energy consumption, they can deliver the most appropriate solution for the end user.

Service & Maintenance

We offer a range of service and maintenance packages; from ad-hoc visits and troubleshooting to ongoing servicing and support.

Solutions

Lighting is a collaborative process and should ultimately be as practical as it is beautiful. That is why we work in partnership with specialist electrical contractors, lighting designers and end users to ensure we deliver the perfect lighting approach for your project and budget objectives.

Specialist Kit

Working with some of the world's most cutting-edge lighting control kit manufacturers, and with in-house capability to adapt systems to suit individual projects we can source and tailor the best kit on the market today.

OUR LIGHTING CONTROL PRODUCTS

When it comes to lighting control systems, our team are highly knowledgeable across most of the leading brands, and will be able to provide the support you need.

- Mode Lighting
- Schnieder CBus
- Lutron RA2
- Casambi
- Dali
- DMX

Mode Lighting

Mode is the industry choice for hospitality and leisure leading the way in the implementation of lighting control. We have a vast amount of experience in terms of providing support for the selection, design and development using both the Tiger and eDIN range of Mode systems.

Schnieder CBus

C-Bus (from Clipsal, a Schneider brand) is a communication protocol for lighting control solutions, combining controls, sensors and user interfaces to provide automation control of lighting using Cat.5 cable. This method improves the reliability of command transmission and makes C-Bus far more suitable for large commercial buildings and bespoke domestic settings.

Lutron RA2

The ultimate in domestic lighting management, installing the Lutron RA2 Select into any room in will create different moods within the house- whether you are cooking, getting ready to sit down and watch a film, or entertaining friends and family.

Lutron Ra2 Select is designed to be programmed by using the Lutron App. If you require on site programming or support, we can provide this.

DALI

DALI stands for Digital Addressable Lighting Interface. It is a 2-way communications protocol that is used to provide control over, and communication between, the components in a lighting system. One of the most popular, smart and energy efficient solutions on the market, it makes an excellent choice for any lighting control solution scenario

Casambi

The most talked-about innovation in Lighting Control for a generation, Casambi is the most robust, cost-effective, future-proof, wireless solution on the market today. Not only is this multifunctional system IOT compatible, it integrates with any lights and is based on Bluetooth low energy.

DMX

A superb solution for stage lighting, DMX is the market leader within the entertainment industry.

Essentially a lighting control console is used to manage a network of lighting fixtures, working in a master slave / relationship. These slave fixtures are linked in a series to the console, one to the next to the next in what is commonly called a daisy chain. Typically, a DMX cable will use a 5 pin XLR connector, though usually the cable is only three cores, positive, negative and shield/ground. Highly specialised, our DMX team have the experience to deliver outstanding stage lighting, whatever the event.

OUR SECTORS

- Hospitality
- Hotels & Leisure
- Retail
- Commercial Spaces
- Education
- Residential

Hospitality

We have vast experience working with some of the UK's hottest hospitality brands. Our expert knowledge in architectural lighting control means we can work with specialist lighting designers to help to create the perfect ambience for your space. From intimate and moody to high octane energy, the right lighting approach & working out how to control it, can make or break how you experience a venue.

Hotel & Leisure

We have a rich history managing the lighting control functionality for hotels, spas and leisure facilities. We can make lighting designs work efficiently for the end user & recommend energy efficient solutions for hoteliers looking to save energy with our bespoke hotel solutions.

Retail

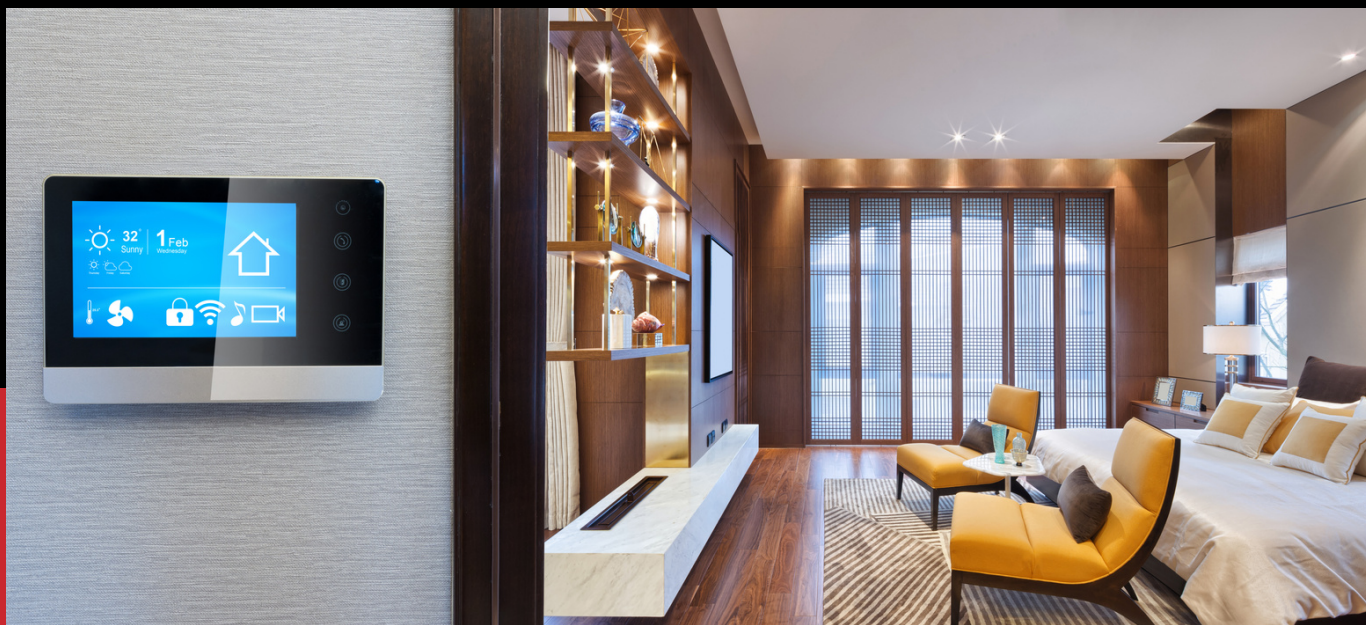

From boutiques and famous brands to independent retailers and even marketplaces, we have worked with most types of retail outlets. Controlling the lighting functionality in store is key to creating the perfect retail landscape to entice customers to buy, as well as saving energy during downtimes.

Education

Energy saving, multi-zone lighting which needs to address a myriad of ever-changing tasks, makes designing & controlling lighting in schools both challenging and rewarding. From large scale theatre and stage lighting provision, to lighting management for classrooms and washrooms, we can help schools make an impact when they need to, whilst embracing a greener and leaner approach to their overall lighting provision.

Residential

Having operated at the luxury end of the domestic market for over 15+ years, we have a vast amount of experience in managing lighting solutions for the end-user, ensuring that it's as practical as it is beautiful. From large-scale one-off developments to luxury apartments and everything in-between, we can create the perfect lighting approach for any room and any project.
